LinkedIn: [samuel-amanze-05316b27a](#) | GitHub: [@thedesigngrandmaster](#) | Lagos, Nigeria.

Results-oriented Software Developer with a focus on building scalable web solutions. Experienced in transforming complex business requirements into deployed applications using React, TypeScript, and Supabase. Passionate about solving payment latency issues and building efficient e-commerce architectures for the African market.

Professional Projects

Newmanstore Collections (Luxury E-Commerce)

Full-Stack Engineer

[Live Link](#) | [GitHub](#)

Stack: React, TypeScript, Shopify Storefront API, Supabase, TailwindCSS

- Architected a high-performance luxury e-commerce platform integrating the Shopify Storefront API, enabling real-time inventory synchronization and seamless product management for 500+ SKUs.
- Engineered a localized payment and checkout system supporting NGN currency conversion, the user experience for the Nigerian market and reducing cart abandonment by approximately 15%.
- Developed a custom admin dashboard and automated invoice mailing system using Supabase Edge Functions, streamlining order processing and reducing manual administrative time by 40%.

SyncStep (Sneaker Retail Platform)

Full-Stack Engineer

[Live Link](#) | [GitHub](#)

Stack: React, TypeScript, Vite, Supabase Auth & DB

- Deployed a scalable full-stack sneaker retail application featuring a robust product CRUD system and dynamic shopping cart state management using React Context API.
- Implemented serverless backend logic for secure authentication and automated order workflows, including instant email confirmations via Supabase triggers.
- Designed a mobile-responsive UI with direct WhatsApp integration, facilitating instant customer support and driving direct-to-consumer sales channels.

Webre (Crypto & Forex Trading Interface)

Frontend Engineer

[Live Link](#) | [GitHub](#)

Stack: JavaScript (ES6+), CSS3, Financial Data APIs

- Designed a responsive financial trading interface visualizing real-time market data, ensuring sub-second rendering speeds for dynamic crypto and forex charts.
- Implemented secure user authentication flows and a personal portfolio tracking system, adhering to modern security best practices for handling sensitive user data.

Haus (Real Estate Listing Platform)

Frontend Engineer

[Live Link](#) | [GitHub](#)

Stack: JavaScript, Geolocation API, Responsive Design

- Developed an interactive real-time property listing platform featuring advanced search filtering and dynamic map integration for location-based property discovery.
- Optimized frontend performance and asset loading, achieving a 90+ Google Lighthouse score and ensuring a seamless browsing experience on mobile devices.
